

RoboFlail® one Diesel

The **RoboFlail one Diesel** delivers an even more powerful version of the proven **RoboFlail one** system.

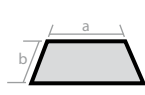

890 kg

112 cm

5000 m²

50°

Compared to the petrol version, this model has even more power for powerful work with its water-cooled and robust 25 HP Yanmar diesel engine. The **RoboFlail one Diesel** is equipped with a flail mower deck. With this powerful mowing deck, the mown product is shredded into the smallest pieces. It also features forward and reverse mowing that is gentle on the soil.

A wide track ensures easy work on slopes, and sensitive, millimetre-accurate steering is very simple with the two **ones**. The all-terrain rubber track provides maximum grip and easy driving on roads and slopes. You no longer need to annoyingly cover the spikes.

Thanks to new software, the **RoboFlail one** systems now have even better handling characteristics on difficult terrain. As a result, the propulsion power is also optimally transmitted to the caterpillars mounted on spherical rollers on the **RoboFlail one Diesel**.

Technical data

Engine	Water-cooled Yanmar Diesel Engine with 19 kW (25 HP)
Travel drive	Hydrostatic via two pumps with two wheel motors (accumulator brake)
Tank	30 litres, swivel-mounted
Speed	Infinitely variable speed adjustment, max. 8 km/h
Cutting technology	Classic flail mower
Weight	1050 kg incl. mowing deck
Length/width/height	165/180/100 cm
max. slope gradient	55° (depending on the subsoil)
